ONLINE USER REPORTING

INTRODUCTION

Half of the hospitals in the United States use a local workstation system (like Midas+ Report Track Reports) to create customized reports for Care Management, Case Management, Provider Credentialing, Lab data, etc... This represents a management load, requires specialized stuff for workstations maintenance, and complicates the generation of comparable reports at different phases of the patient care pipeline.

It is time to put the Internet to work on providing a modern service to make the creation and processing of reports convenient, simple, and accessible for end users and administrators alike.

Our Online User Reporting system will enable end users to create their own customized reports, transparently, based on data in existing databases hosted by client organizations. It makes the creation of reports a fast and simple task that can be done by technical personnel after minimal training. It can serve any kind of organization and business with data in a SQL (or non-SQL) databases.

It could be used in wide range of organizations, such as medical hospitals, county and government offices, industrial headquarters, etc... Any organization with a database can use it for getting fast highly informational and statistical reports.

The connection from our system to the customer's database can be done using a single connection string (if database server is accessible from the Internet) or by establishing an SSH tunnel from our cloud server to the customer's local database server, or by deploying our agent software on the customer's local Web server with connection to the customer's Database server.

Our system utilizes the restricted access to customer's database with only **reading** permissions. We never install anything or write data in customer's database.

TECHNOLOGY

Our innovation lies in the transparent and modular generation of reports from arbitrary source data. Specifically, we have created:

1. An original design of a structure of OUR special tables and classes (in MySQL, or SQL Server, or Intersystems Cache databases) to keep all needed information of data query design, report design, data and report format, and statistical data calculations,
2. A data module to access and process the data from a database as needed for the report.
3. A report generation module to access report design information stored in tables/classes in database and process of RDL or Crystal report with possibility of exporting it into Excel, Word, or PDF.
4. A web interface for simple user access and creation of reports including the automatic data mining and design of SSRS (RDL) reports or importing of existing RDL and possible Crystal Reports definitions from legacy tools. The creation of the report is divided on simple tasks served by separate web pages simplifying the process for the end user.
5. A simple interface that utilized data-mined information to abstract the inherent complexity of report design, enabling minimally trained staff to make meaningful reports.
6. A module allowing administrators to define users with granular levels of access to various data (i.e., full versus anonymized versus aggregated), allowing careful access control tracking from the data model through the report generation to carefully comply with data control policies and regulations.

COMPETITION

Google Reporting – requires database accessible from the Internet.

Midas+ ReporTrack Reports – local VB.NET application with connection to local Cache database

Birst.com – requires decomposition of relative data and composition to their tables, restricted to about 10000 records.

Easy.Report – connects to database by connection string to Internet interface, doesn't serve Cache database, exports only to Excel.

Online User Reporting

LANDING PAGE

[Landing Page Document](#)

SIGN IN

From the start page at oureports.com, click the “Sign In” button.

Online User Reporting

DEMO

Complete functionality for [Online User Reporting](#) is available using the Demo database. The screen shots in this document are Chrome version 114.0.5735.90.

There are two ways to start demo:

FROM START PAGE

From the start page at oureports.com, click the “Sandbox” button.

Online Data Analytics and Reporting

Automatically analyzes data in your existing database or your file, and generates reports, charts, maps, dashboards, provides interface for ad hoc reports and statistical research, matrix balancing, makes the creation and processing of reports convenient, simple, and accessible for end users and administrators alike.

Some reports are locked and a demo user cannot edit them. These reports can be used as templates and copied for editing. Reports created by other demo users are open for editing, copying or deleting. Demo users can also create new reports.

SHOWING A REPORT

To show a report, click the report title link in the “[Show Report](#)” column

demo3_27_2019_2_43PM	Demo Test	edit	copy	delete	2028-05-23 00:00:00
----------------------	---------------------------	----------------------	----------------------	------------------------	---------------------

COPYING A REPORT

Click the “[copy](#)” link for the report you wish to copy.

demo3_27_2019_2_43PM	Demo Test	edit	copy	delete	2028-05-23 00:00:00
----------------------	---------------------------	----------------------	----------------------	------------------------	---------------------

A dialog like the following is then displayed:

Copy Report

Copy Report -- Demo Test (demo3_27_2019_2_43PM) -- To:

New Report Id:

New Report Title:

Online User Reporting

Enter a unique Report Title and click the “[Copy Report](#)” button. A message like the following will then be displayed:

Click the “[Return To List](#)” button to return to the report list or the “[Edit Report](#)” button to edit the copied report.

CREATING A REPORT

Click the “[New Report](#)” link above the report list.

A dialog like the following is then displayed:

Enter a unique Report Title and click the “[Create Report](#)” button. The [Report Data Definition](#) page then displays.

DELETING A REPORT

Click the “[delete](#)” link for the report you wish to delete.

A message box like the following is then displayed:

Click the “[Yes](#)” button to delete the report or the “[No](#)” button to ignore the delete request. The report list is redisplayed. If the “[Yes](#)” button has been pressed, the corresponding report is no longer in the list.

Online User Reporting

EDITING A REPORT

Click the “[edit](#)” link for the report you wish to edit.

demo9_7_13_2019_4_40PM	Demo Test	edit	copy	delete	2030-03-22 03:48:00
------------------------	-----------	----------------------	----------------------	------------------------	------------------------

The [Report Definition](#) page for that report then displays.

Online User Reporting

REPORT DEFINITION

ADVANCED USER

Checking the “[Advanced User](#)” checkbox displays advanced report information and allows the user to modify advanced report options if desired. The “[Advanced User](#)” checkbox is only available for users that have **Admin privileges and above**.

REPORT INFO

The Report Info view displays upon [editing a report](#) from the [report list](#), or clicking on the “[Report Definition](#)” option from the left options menu, or clicking on the “[Report Info](#)” tab.

NORMAL USER VIEW

A normal user can modify the [Report Title](#), [Report Orientation](#), and [Page Footer](#).

REPORT ID

Report ID: fh12_12_7_2022_2_19PM

This is a display only field containing the internally created report id for the report.

Data SOURCE

Data Source: sql ▼

sql

sp

sql – Data is obtained by an SQL query.

sp – Data is obtained by a stored procedure.

Using a stored procedure as a data source requires that a stored procedure be created in the client database.

Creating a report based on a stored procedure is not covered in this document.

Online User Reporting

DATA QUERY TEXT

Data Query Text:	☐ Use Entered Text For Query
	<pre>SELECT encounter.*, patient.Address1, patient.Address2, patient.Age, patient.City, patient.ID, patient.Name, patient.Sex, patient.State, patient.ZipCode, 'state'.* FROM encounter INNER JOIN patient ON (encounter.PatientID=patient.id) INNER JOIN 'state' ON (patient.State='state'.code) ORDER BY encounter.ID ASC</pre>

Usually this displays the SQL query produced from defining the report using [Report Definition](#), [Report Data Definition](#), and/or [Report Format Definition](#). However, you can enter or change an SQL query here if desired. Check the ☐ **Use Entered Text For Query** check box before entering the query. The minimum query is “[SELECT * FROM \[your table\]](#)”.

Click the “[Save](#)” button to create the report. **Remember that if you submit any changes made through the report definition functions, this query may be replaced.**

REPORT FILES

Report Files :	Select file to upload: Browse...	or from web site: https://
	Insert into new table:	or into existing table:
	☐ delete all records before upload	csv file delimiter:
	Upload formatted file into table(s).	Update the report in dashboards Upload the report definition file

The Report Files section allows an advanced user to append to or create tables from a formatted file (CSV, XML, JSON), to update report dashboards, or to create a report using an externally modified Report Definition File (RDL).

UPLOADING A FORMATTED FILE INTO TABLE(S)

- Select a file from the client computer by pressing the button or by entering a web site address in the web site text box.
- Enter a new table name in the new table text box or choose an existing table name from the existing table drop down.
- If using an existing table, checking the ☐ **delete all records before upload** check box clears the table before the data in the file is added. Otherwise, the file’s data is appended to the table. **NOTE: If data is being uploaded to an existing table, the field names defined in the file must be identical to the fields defined in the table.**
- If creating or updating a table from a delimited file, the delimiter separating the data can be indicated by entering it in the “csv file delimiter” text box. This value defaults to comma (“,”).
- Press the button to upload the file to a new table or to append the file’s data to an existing table.
- If the upload is successful, a message like the following displays:

The table created or modified above will now be available in the table list in [Report Data Definition](#).

Online User Reporting

UPDATING THE REPORT DASHBOARDS

UPLOADING THE REPORT DEFINITION FILE

Online User Reporting

PARAMETERS

Parameters allow users to interactively filter [report data](#) for one or more values when viewing report data in [Explore Report Data](#) or [Show Report](#). A parameter is not like the filter that can be defined in [Report Data Definition](#) because it can be changed by the user by selecting values from a dropdown. Click “[Report Parameters](#)” from the left options menu or “[Parameters](#)” tab.

RELATED PARAMETERS

☒ related parameters

Parameters 3

New Parameter

Check the “related parameters” checkbox if you wish the report to refresh as you choose each parameter at report time. As each parameter is chosen, the other parameter lists are repopulated based on what’s chosen.

If it’s not checked, you will have to click the “Apply” button before the report is refreshed using the chosen parameters. Other parameter lists aren’t changed after the parameters have been applied. If you have more than one parameter, not checking “related parameters” might be faster because you can change more than one parameter without having to wait for the report to refresh each time.

Online User Reporting

ADDING A PARAMETER

Click the “[New Parameter](#)” button.

ADVANCED USER

An advanced user can choose one of two ways to define a new parameter:

Clicking on the “[Select Parameters](#)” button will display the following dialog:

Select the fields to be parameters and click the “[Submit Parameters](#)” button. This is the only way to define more than one parameter at the same time.

Online User Reporting

Clicking on the “[Enter Definition Manually](#)” button will display the following dialog:

The "Add Parameter" dialog box is shown with the following fields:

- Field:** A dropdown menu with a downward arrow.
- Label:** A text input field.
- Parameter:** A text input field.
- Type:** A dropdown menu with a downward arrow.
- SQL:** A large text area for entering SQL queries.

At the bottom of the dialog are two buttons: "Add Parameter" and "Cancel".

Only one parameter at a time can be defined with this method, but details can be modified here that are not available to the selection method.

Select a field from the “[Field:](#)” drop down.

The "Add Parameter" dialog box is shown with the following fields populated:

- Field:** filmcategory.CategoryName
- Label:** CategoryName
- Parameter:** CategoryName
- Type:** nvarchar
- SQL:** SELECT DISTINCT CategoryName FROM filmcategory ORDER BY CategoryName

At the bottom of the dialog are two buttons: "Add Parameter" and "Cancel".

When the field is chosen, all other entries are defaulted. They can be modified, but most of the time only “[Label:](#)” may need to be changed. Unless you are knowledgeable in SQL, it’s recommended that you not modify the query in “[SQL:](#)” Press the “[Add Parameter](#)” button to add the parameter.

Online User Reporting

NORMAL USER

UPDATING DATA FIELDS

Click the “Submit” button to update the report’s definition files. If the update is successful, you should get the “Report Format has been updated” message.

Update report:

Report Format has been updated.

Online User Reporting

JOIN TABLES

Click “Joins” from the left option menu or the “Join Tables” tab.

Online Data Analytics and Reporting

Report Data Definition - Demo Test New

Join Tables

Log Off; List of Reports; Report Definition; Report Parameters; Share Report (Users); Report Data Definition; Data Fields; **Joins**; Filters; Sorting; Report Format Definition; Advanced Report Designer; Columns, Expressions; Groups, Total; Combine Values; Map Definition; Explore Report Data; Export Data to Excel; Export Data to CSV

Add Join manually:

Table1: ☐ show all tables Field1: Join Type: Table2: ☐ show all tables Field2: Add Join

Or add from the list of possible Joins for report tables if any:

custom: Film JOIN FilmCategory ON (Film.Category = FilmCategory.ID)	Add Join
custom: Film JOIN Review ON (Film.ID = Review.Film)	Add Join
custom: film JOIN show ON (film.Category = show.Film)	Add Join
custom: Film JOIN Show ON (Film.ID = Show.Film)	Add Join

Report Joins added so far:

Table1:	Field1	Join Type	Table2:	Field2	Up	Down	Reverse	Delete

Update report: Submit

Possible joins are calculated and displayed in the possible joins list:

custom: Film JOIN FilmCategory ON (Film.Category = FilmCategory.ID)	Add Join
custom: Film JOIN Review ON (Film.ID = Review.Film)	Add Join
custom: film JOIN show ON (film.Category = show.Film)	Add Join
custom: Film JOIN Show ON (Film.ID = Show.Film)	Add Join

ADDING A JOIN

To add a join, either define a join manually or choose a join from the possible joins list. The joins will then be displayed in the added joins list.

ADD MANUALLY

Choose join data from the drop downs and click the “Add Join” button.

Add Join manually:

Table1: ☐ show all tables Field1: Join Type: Table2: ☐ show all tables Field2: Add Join

Film Category Join FilmCategory ID

ADD FROM POSSIBLE JOINS LIST

Click the “add join” link to the right of join to add.

Or add from the list of possible Joins for report tables if any:

custom: Film JOIN FilmCategory ON (Film.Category = FilmCategory.ID)	Add Join
custom: Film JOIN Review ON (Film.ID = Review.Film)	Add Join
custom: film JOIN show ON (film.Category = show.Film)	Add Join
custom: Film JOIN Show ON (Film.ID = Show.Film)	Add Join

ADDED JOINS LIST

Added joins will be displayed in added joins list.

Report Joins added so far:

Online User Reporting

FILTERS

To add conditions to the data query open the Filters view by clicking on the “Filters” option in the left options menu or the “Filters” tab in [Report Data Definition](#) or the “Filters” option from the Report Data menu in [Report Definition](#).

ADDING A CONDITION

To add a condition, click the “New Condition” button.

The “New Condition” dialog then displays:

The 'New Condition' dialog box is shown. It has a title bar 'New Condition'. Inside, there are three main sections: 'Field:' with a dropdown menu, 'Operator:' with a checkbox for 'Not' and a dropdown for '=', and 'Value:' with a text input field. To the right of the 'Value' input is a 'Fields' button. At the bottom of the dialog are two buttons: 'Add Condition' and 'Cancel'.

Enter condition data and click “Add Condition”.

The 'New Condition' dialog box is shown again, but now with data entered. The 'Field' dropdown is set to 'film.PlayingNow', the 'Operator' is set to '=', and the 'Value' input field contains the text 'True'. The 'Add Condition' button is now highlighted with a red box.

The defined condition then appears in the “Conditions” list.

Conditions								New Condition	Customize Logic
Table	Field	Operator	Value 1	Value 2	Logical Op	Group	Rec Order		
film	PlayingNow	=	True		And		1	edit	delete

Online User Reporting

EDITING A CONDITION

Click the “[edit](#)” link to the right of the condition to be edited in Conditions list.

Film	PlayingNow	=	True	And	1	edit	delete
------	------------	---	------	-----	---	----------------------	------------------------

Update Condition

Field:

Operator: ☒ Not

Value:

Make the changes and click the “Update Condition” button.

Film	PlayingNow	<>	True	And	1	edit	delete
------	------------	----	------	-----	---	----------------------	------------------------

DELETING A CONDITION

Click the “[delete](#)” link to the right of the condition to be deleted in Conditions list.

Table	Field	Operator	Value 1	Value 2	Logical Op	Group	Rec Order		
filmcategory	CategoryName	<>	Drama		And		1	edit	delete
film	Rating	<>	R		And		2	edit	delete
film	PlayingNow	=	True		And		3	edit	delete

The condition is immediately deleted.

Table	Field	Operator	Value 1	Value 2	Logical Op	Group	Rec Order		
filmcategory	CategoryName	<>	Drama		And		1	edit	delete
film	PlayingNow	=	True		And		2	edit	delete

CUSTOMIZING LOGIC

If more than one condition is defined, the “Customize Logic” button becomes enabled.

Conditions								New Condition	Customize Logic
Table	Field	Operator	Value 1	Value 2	Logical Op	Group	Rec Order		
filmcategory	CategoryName	<>	Drama		And		1	edit	delete
film	PlayingNow	=	True		And		2	edit	delete

See this [Customizing Logic Document](#) for instructions.

UPDATING FILTERS

Conditions are updated to the report by clicking the “Save Conditions” button.

Report Format has been updated.

Online User Reporting

SORTING

To add sorts to the data query open the Sorts view by clicking on the “[Sorting](#)” option in the left options menu or the “[Sorting](#)” tab in [Report Data Definition](#) or the “[Sorting](#)” option from the Report Data menu in [Report Definition](#).

The screenshot shows the 'Online Data Analytics and Reporting' interface. On the left is a navigation menu with options like 'Log Off', 'List of Reports', 'Report Definition', 'Report Parameters', 'Share Report (Users)', 'Report Data Definition', 'Data fields', 'Joins', 'Filters', 'Sorting' (highlighted with a red box), 'Report Format Definition', 'Advanced Report Designer', 'Columns, Expressions', and 'Groups, Total'. The main area is titled 'Report Data Definition - Demo Test' and has tabs for 'Data Fields', 'Join Tables', 'Filters', and 'Sorting' (highlighted with a red box). Below the tabs, there's a 'SORT BY:' dropdown set to 'ASC'. To the right, there are 'Tables:' and 'Fields:' dropdowns, both set to 'film' and 'ID' respectively, and a 'Select Field to Sorting' button. Below these is a table with columns: 'Tables selected:', 'Sort by fields:', 'Up', 'Down', 'Delete', and 'Friendly Names'. The table is currently empty. At the bottom, there's a SQL query: 'SELECT Film.Category, Film.Description, Film.PlayingNow, Film.Rating, FilmCategory.CategoryName, Review.ReviewScore, Review.ReviewText FROM Film INNER JOIN FilmCategory ON (Film.Category=FilmCategory.ID) INNER JOIN Review ON (Film.ID=Review.Film) WHERE (FilmCategory.CategoryName <> 'Drama') AND ((Film.Rating Like 'PG%') OR (Film.PlayingNow = 'True'))'. Below the query is an 'Update report:' label and a 'Submit' button.

ADDING A SORT

Choose sort direction, if necessary, from the “[SORT BY:](#)” dropdown:

A close-up of the 'SORT BY:' dropdown menu. The dropdown is open, showing three options: 'ASC' (selected and highlighted in blue), 'ASC', and 'DESC'. The 'Tables:' dropdown next to it is set to 'film'.

Sort direction defaults to “[ASC](#)”.

Select table and field and click “[Select Field to Sorting](#)”:

A close-up of the 'Tables:' and 'Fields:' dropdowns. The 'Tables:' dropdown is set to 'filmcategory' and the 'Fields:' dropdown is set to 'CategoryName'. The 'Select Field to Sorting' button is visible to the right.

The sort is then added to the sort list.

Tables selected:	Sort by fields:	Up	Down	Delete	Friendly Names
filmcategory	CategoryName			delete	

Online User Reporting

CHANGING SORT POSITION

If there more than one sort is defined, the sort position is changed by pressing the “up” or “down” link to the right of the sort in the list.

Tables selected:	Sort by fields:	Up	Down	Delete	Friendly Names
film	Rating		down	delete	
filmcategory	CategoryName	up		delete	

Tables selected:	Sort by fields:	Up	Down	Delete	Friendly Names
filmcategory	CategoryName		down	delete	
film	Rating	up		delete	

DELETING A SORT

Click the “delete” link to the right of the sort you wish to delete.

Tables selected:	Sort by fields:	Up	Down	Delete	Friendly Names
filmcategory	CategoryName		down	delete	
film	Rating	up		delete	

Tables selected:	Sort by fields:	Up	Down	Delete	Friendly Names
filmcategory	CategoryName			delete	

EDITING A SORT

Editing a sort directly is not possible. The sort will have to be deleted and then re-added with the changes.

UPDATING THE SORTS

To update the sorts to the report, click the “Submit” button.

Update report:

Submit

Report Format has been updated.

SET COLUMN ORDER DIALOG

Setting the field order of multiple columns at once can be accomplished using the Set Column Order Dialog:

Online User Reporting

Press the Set Column Order Button:

The following dialog appears:

Column order can be set in one of two ways:

1. By dragging and dropping a column item to the desired position. Dropping an item on top of the last item will put the dropped item at the end of the list. Dropping an item on top of any other item will place that item before the target item.
2. By selecting an item and moving it up or down in the list by pressing the  or  button.

To save the column order settings press the  button.

Online User Reporting

EDITING A REPORT COLUMN

Choose the column to edit from the “Column:” drop down and change the data you wish. If you want to replace it, check the “replace column value” checkbox and then click the “Add/Update Column” button. If you don’t check this checkbox, a new column will be created. This can cause errors or result in duplicate data at runtime.

Complaint

Diagnosis

StartDate

EndDate

Facility

Room

Procedure

Payer

Name

Sex

Age

DateOfBirth

- Enter a Comment and/or a Friendly Name if desired and press the **Add/Update Column** button.

Note: Do not check the ☐ **replace column value** checkbox. See [Replacing A Column's Value with Combined Values](#) below.

For the set of columns defined by: Facility combine all values in the Column: Payer Comments: Payers defined to facility Friendly Name: Facility Payers ☐ replace column value **Add/Update Column**

Combine values in Columns

Column Name	For the set of columns defined by	combine all values in the Column	Friendly Name	Delete
Payer_Combined	Facility	Payer	Facility Payers	delete

The combined column defined will appear in the column list displayed on the "Column Order, Expression" tab:

[Column Order, Expressions](#) [Groups and Totals](#) [Combine column values](#)

Expressions, Functions, Friendly Names, and Column Order in Report:

Column: ID Friendly Name: ☐ replace column value **Add/Update Column**

Function type: Text Function: Expression:

Report Columns

Column	Delete	Up	Down	Order	Expression	Friendly name
Payer_Combined	delete		down	0		Facility Payers
Address	delete	up	down	1	Fields!Address1.Value & " " & Fields!Address2.Value & " " & Fields!City.Value & " " & Fields!State.Value & " " & Fields!ZipCode.Value	Address
Name	delete	up	down	2		
Sex	delete	up	down	3	IIf(Fields!Sex.Value="M","Male","Female")	Sex
AccountNo	delete	up	down	4		

It can be positioned in the report from here.

The caption of the combined column on the report will be the friendly name if defined. If the friendly name is not defined, the caption on the report will be the column name created for the combined field.

Online User Reporting

The values in the combined column will be combined with the “|” delimiter for all records belonging to the group. In the example above, the values in the field “Payer” will be combined and put in the “Facility Payers” column for each “Facility” group.

Patients By Facility Childrens Hospital							
Name	Sex	Address	Active	Facility	Payer	Facility Payers	AccountNo
Sherlock Holmes	Male	4368 Sycamore Rd Durango,CO 70731	No	Childrens Hospital	United Healthcare	Cigna United Healthcare	2869832
Nick Charles	Male	4223 E. Waverly Ave Provo,UT 63067	Yes	Childrens Hospital	Cigna	Cigna United Healthcare	8648302
Mike Holmes	Male	4368 Sycamore Rd Durango,CO 70731	No	Childrens Hospital	United Healthcare	Cigna United Healthcare	5458928
Jack Charles	Male	4223 E. Waverly Ave Provo,UT 63067	Yes	Childrens Hospital	Cigna	Cigna United Healthcare	8374832
Mike Browning	Male	4368 Sycamore Rd Durango,CO 70731	No	Childrens Hospital	United Healthcare	Cigna United Healthcare	2403920
Jack Casey	Male	4223 E. Waverly Ave Provo,UT 63067	Yes	Childrens Hospital	Cigna	Cigna United Healthcare	4845932

REPLACING A COLUMN’S VALUE WITH COMBINED VALUES

In the above example, values of the Payer column are combined and put in a new column (“Facility Payers”). However, there is a way of placing the combined fields in the Payer column itself:

- Set up the columns as shown in the [Adding A Combined Column](#) section.
- Enter a comment if desired.
- Do not enter a friendly name. Any friendly name you enter will be replaced by the friendly name you defined for the column in the “Column Order, Expressions” tab or the name of the column if no friendly name is defined.
- Check the ☒ **replace column value** checkbox. The column name or friendly name will now appear as the read-only friendly name.
- Press the **Add/Update Column** button.

For the set of columns defined by: Facility combine all values in the Column: Payer
 Comments: Combined payers now in Payer Column
 Friendly Name: Payer
☒ replace column value

Column Name	For the set of columns defined by	combine all values in the Column	Friendly Name	Delete
Payer	Facility	Payer	Payer	delete

The combined columns will now appear in the Payer column on the Report:

DELETING A COMBINED COLUMN

DELETING A NEW COLUMN CONTAINING COMBINED VALUES

Click the “delete” link to for the combined column you wish to delete.

Column Name	For the set of columns defined by	combine all values in the Column	Friendly Name	Delete
Payer_Combined	Facility	Payer	Facility Payers	delete

Once the report has been updated, the combined column will no longer appear in the report. However, the column from which the values were combined will still be included in the report.

DELETING A COLUMN WHICH HAS REPLACED ITS VALUE WITH COMBINED VALUES

Click the “delete” link to for the combined column you wish to delete.

Column Name	For the set of columns defined by	combine all values in the Column	Friendly Name	Delete
Payer	Facility	Payer	Payer	delete

Once the report has been updated, the column will no longer appear in the report. It also will be deleted from the column list defined in the “Column Order, Expressions” tab. If you want the report to include its actual value in the report, you will have to redefine it in “Column Order, Expressions”.

UPDATING COMBINED COLUMN IN THE REPORT

Click the “Submit” button to update combined columns to the report.

Update report:	Submit

Search

Film Category: All Rating: All Apply

Records returned: 4

Category	Description	ID	PlayingNow	Rating	Title	CategoryName	ReviewScore	ReviewText
4	A whirlwind tale of one man's search for truth	14	True	PG	The Santa Fe Conspiracy	Action	4	Keanu Ulmenson (Patrick Rooney) is an outspoken taxi driver who takes a very dim view of anything to do with the government - so much so that he spends his days making up complicated scenarios of conspiracies. When one of his theories happens to be true, he finds himself chased by the person hiding behind it. Helen Wayne is the love interest of the film with only one problem - she works for the government Patrick so devotedly mistrusts. Any film containing such a heavyweight cast is of course going to be nothing short of mesmerising. The plotline reaches out to a platter of genres and the fact that it can't be pigeonholed, only makes it better viewing. Anecdote: Keanu Ulmenson went that extra mile to get to know his co-star Helen, by dispatching a gift-wrapped freeze-dried rat to her, before filming started!
4	A humorous farce of scandal amid the search for self identity	15	True	PG-1	An Invisible Attitude	Action	4	Scandinavian director Johann Johansson introduces a memorably unconventional heroine in his superb adaptation of the best-selling novel by James Craydon. Part one of a trilogy, this is a gripping and suspenseful yarn full of intrigue and deception that pulls no punches with the violence meted out to the morally flawed characters. The violence is graphic and shocking, yet these scenes are never gratuitous and the director ensures that every bone-crunching punch is vital to the serpentine narrative....
5	A humorous look at cross-species friendship	20	True	G	The Holistic Lizard	Comedy	2	Hollywood has enjoyed a long love affair with man's best friend, with the canine star often outshining the human actors. This is certainly true in this yarn, which pits Ben Castor and Ann-Sue Pollux against the cutest of fluffy Akita puppies and an impeccably trained full-grown version. While many dog movies can be little more than a schmaltz-fest, director Medley Scott reins it in, keeping his meditation on love and everyday life just the right side of sentimental..
3	A can't-turn-away tale of pathos and lust	9	True	R	The Joy Diet	Thriller	4	Written and directed by Kenneth Ynglish, this film is this year's The Wrestler, following a self-destructive has-been on the slow and painful road to redemption. Ivan Paricz's portrayal of drunkard Ted Spencer doesn't earn our sympathy with ease, yet through an unlikely romance with reporter Jeanine Alden (Conny Johnson), we are able to glimpse the tenderness and sadness in this pitiful man. Ivan delivers a compelling performance, and he is matched by this emotionally raw portrayal of a lonely woman who is heading for heartache.

SELECTING PARAMETERS

If Report [Parameters](#) are defined, a combo box will display for each one. "All" is the default value for each parameter. Parameters are applied to the current data.

Category: All Rating: All Apply

Choose parameter(s) and press "Apply" to redisplay the data:

Film Category: Comedy Rating: G Apply

EXPORT STATISTICS TO EXCEL

Click "Export Statistics to Excel" from the left options menu.

The screenshot shows the 'Show Analytics' menu on the left with the following options:

- See Data Overall Statistics
- See Groups Statistics
- Export Statistics to Excel** (highlighted with a red box)
- See Fields Correlation
- Matrix Balancing

To the right, a table displays the following data:

Category Name	Category Name	Count	Value
Film	Film	102	7
ReviewScore	ReviewScore	102	4
ID2	ID2	102	8
AdultPrice	AdultPrice	102	6
ChildPrice	ChildPrice	102	6
TheaterName	TheaterName	102	8
Film1	Film1	102	7
ID3	ID3	102	102
StartTime	StartTime	102	47
Theater	Theater	102	8

Below the menu, a file explorer shows the file 'demo1_14_2019_10....xls' with a red arrow pointing to the 'Open' button.

The screenshot shows an Excel spreadsheet with the following data:

SELECTING PARAMETERS

If Report [Parameters](#) are defined, a combo box will display for each one. “All” is the default value for each parameter. Parameters are applied to the current data.

See [Related Parameters section](#).

RELATED PARAMETERS NOT CHECKED

Choose parameter(s) and press “Apply” to display the data:

Parameters: Theater Title Category StartTime

ShowByFilmByCategoryByTheater

Category <i>Thriller</i>						
Title	Theater	Category	Length	PlayingNow	Rating	StartTime
The New York Robot	Downtown Multiplex	Thriller	100	True	PG	12:25:00
The New York Robot	Downtown Multiplex	Thriller	100	True	PG	14:25:00
The New York Robot	Downtown Multiplex	Thriller	100	True	PG	16:25:00
The New York Robot	Downtown Multiplex	Thriller	100	True	PG	18:25:00
The New York Robot	Downtown Multiplex	Thriller	100	True	PG	20:25:00
Subtotals of Theater for: Category <i>Thriller</i>						
<u>Count:</u>	<u>CntDist:</u>					
5	1					

RELATED PARAMETERS CHECKED

As each parameter is chosen, the report is refreshed.

Online User Reporting

FIELD SEARCH

Field search provides another way to filter report data. One of many possible operators can be applied to the search. Parameters always imply an equal operator. The search is performed on current data.

Enter search criteria and press “Search”:

Online User Reporting

Analytics Dashboard Data Readiness Data and Statistics Report and Charts Dashboards Matrix Balancing Pivot / Cross Tab Variance Analysis Data Profiling

Why Useful: Overall field combinations and report exploration help identify suitable grouped analyses, reports, and charts.

Suggested Fields: Category/Group 1 and 2: AdultPrice, TheaterName, Category, Theater, CategoryName, ChildPrice, ID, date; Argument Y value field: ID, Category, Length, TicketsSold, ID1, Film, ReviewScore, ID2; optional Field2 for correlation, charts, and matrix balancing: ID, Category, Length, TicketsSold, ID1, Film, ReviewScore, ID2

(!!! ATTENTION !!!) SELECT:

Category/Group 1: CategoryName Category/Group 2: TheaterName

The argument value: TicketsSold and the aggregation function: Sum

Optional, used only for charts and matrix balancing if needed:
Select the field2: ReviewScore
and the aggregation function: Sum

Optional, used to add Category/Group to Analytics:
Select the Category/Group: ID

Highly recommended according your selections: matrixpivot ranking importance interpretation totals by groups stats dashboard charts matrix balancing

Search: 43 records AI Recalculate Analytics
