DataAI Lite.....	1
Run the url in browser to see how it works:	1
Enter OpenAI credentials later to use AI for additional analytics	3
Enter OpenAI credentials in the QueryString	4
Select the argument and the aggregation function on the top of the Analytics page (!).....	5
Click the link Help on each page to open the comprehensive documentation:	9
Add Category/Group	9
Working online in memory with DataAILite.....	22
1. Working with your data for free using our limited OpenAI	22
2. DataAILite.com - using user OpenAI.....	22
3. Download DataAILite and install locally	22
Conclusion:	23

Run the url in browser to see how it works:

<http://dtai.one?txtURI=https://oureports.net/OUReports/SAVEDFILES/SampleSalesRecords.CSV>

It will open fully in memory the page with different links to analytical reports, charts, dashboards by categories and groups automatically defined for your data by our algorithms:

To get all such analytics for your data you simply call the url <https://dtai.one> with one parameter txtURI - Web address of the file with the user data (csv, json, xml format).

Your CSV file should have the very first row with column names comma separated as usual.

You can call directly or you can connect from your application to this comprehensive data analysis powered by AI by calling the url <http://dtai.one> with parameters:

User credentials:

txtURI - Web address of the file with the user data (csv, json, xml format)

The QueryString should look like:

[http://dtai.one?txtURI=\[url of the data\]](http://dtai.one?txtURI=[url of the data])

You can send over the Logon if needed using the QueryString:

txtEmail - Logon or Email or User ID (optional)

[http://dtai.one?txtEmail=\[logon or email\]&txtURI=\[url of the data\]](http://dtai.one?txtEmail=[logon or email]&txtURI=[url of the data])

Enter OpenAI credentials later to use AI for additional analytics

OpenAI account credentials are optional, you can add them later for AI analytics if needed:

txtOpenAIkey - OpenAI key

txtOpenAIorgcode - OpenAI organization code

txtOpenAIurl - OpenAI Base URL

txtOpenAImodel - OpenAI model

txtOpenAImaxtokens - OpenAI maximum tokens limit (128,000 or 200,000 or else)

To add them later click on the link AI on the top of any page. When OpenAI credentials are not previously defined, you will see:

Click on the link “Open AI setting”, enter your OpenAI credentials and click Continue:

[Log off](#)

DataAI Lite in memory

Your setting will be used only to analyze your data in memory and no setting nor data will be kept after Log Off is clicked.

***Email/Logon/User ID:**

Optional - to use the AI functionality(!) in your data analysis, enter your OpenAI account setting below:

[click to sign for new OpenAI account if needed](#)

OpenAI key:

OpenAI organization code:

OpenAI Base URL:

OpenAI model:

OpenAI maximum tokens limit:

Continue

[Documentation, downloads, and full version at DataAI link](#)

Enter OpenAI credentials in the QueryString

If you want to enter your OpenAI credentials from the beginning in the QueryString along with user credentials, the url address will be another one:

`https://oureports.net/DataAIsqLite/DataAIsqLite.aspx?txtURI=[url of the data]`

Add to this QueryString all OpenAI credentials:

`&txtOpenAIkey=[your OpenAI key]`

`&txtOpenAIorgcode=[OpenAI Organization code]`

`&txtOpenAIurl=[as default https:// api.openai.com/ v1/ chat/ completions]`

`&txtOpenAImodel=[as gpt-4o-mini for example]`

`&txtOpenAImaxtokens=[as 128000 or 200000...]`

`&txtEmail=[ email] - optional`

The URL address will be like this one:

`https://oureports.net/DataAIsqLite/DataAIsqLite.aspx?txtEmail=[ email]&txtURI=[url of the data] &txtOpenAIkey=[your OpenAI key] &txtOpenAIorgcode=[OpenAI Organization code]`

&txtOpenAlurl=[OpenAI Base url] &txtOpenAlmodel=[gpt-4o-mini for example]
&txtOpenAlmaxtokens=[128000 or else]

Select the argument and the aggregation function on the top of the Analytics page (!).

The values in the field Argument are used to calculate reports, statistics, analytics, and charts for. In Charts it is the Axis Y.

Aggregation function is used to aggregate the values of the argument field. For text field it is Count or Count Distinct, for numeric fields: Sum, Max, Min, Avg, StDev, Value as well.

The screenshot shows the 'Online User Reporting' interface. At the top, there's a navigation bar with links like 'Correlation', 'Data and Statistics', 'Report and Charts', 'List of User Dashboards', 'Matrix Balancing', 'Help', and 'Log off'. Below this, the page title is 'time12142025103905AM - Analytics'. The main content area is divided into two sections. The left section, titled 'The argument:', shows a dropdown menu for 'Region' and a 'Category/Group' dropdown. The right section, titled 'and the aggregation function:', shows a dropdown menu for 'Count'. Below these, there's a table with columns for 'Category/Group 1', 'Category/Group 2', and various aggregation functions. The table lists various reports such as 'Country', 'Region', 'SalesChannel', 'OrderPriority', 'Item Type', 'OrderDate', 'OrderID', 'ShipDate', 'UnitsSold', 'UnitPrice', 'UnitCost', 'TotalRevenue', 'TotalCost', and 'TotalProfit'. The table is titled 'time12142025103905AM - Analytics' and includes a search bar and a 'Recalculate Analytics' button.

The screenshot shows the 'Online User Reporting' interface. At the top, there's a navigation bar with 'Log Off', 'List of Reports', 'Export Report Data', 'Export Data to Excel', 'Export Data to CSV', 'Export Data to Delimited File', 'Export Data to XML', 'Show Report', 'Show Generic Report', 'Show Report Charts', 'Export Report to Excel', 'Export Report to Word', 'Export Report to PDF', 'Show Analytics', 'See Data Overall Statistics', 'Export Overall Statistics to Excel', 'See Group Statistics', 'See Fields Correlations', and 'Matrix Balancing'. The main area displays a table with 25 records. The table has columns for 'Category/Group 1', 'Category/Group 2', 'Matrix/Pivot', 'Bar Chart', 'Avg', 'StdDev', and 'Value'. A dropdown menu is open for the 'Value' column, showing options: 'Sum', 'Max', 'Min', and 'Avg'. The table is filtered by 'Country' and 'Region'. The table is titled 'time12142025103905AM - Analytics'.

You can select Categories/Groups. Corresponding lines with links to reports will be highlighted in green: one on the top of the table and another one in table rows.

For each argument and each aggregation function selected, all links are working and open the reports and charts, calculating statistics for the argument field values and aggregation function:

The screenshot shows the 'Online User Reporting' interface. At the top, there's a navigation bar with 'Log Off', 'List of Reports', 'Export Report Data', 'Export Data to Excel', 'Export Data to CSV', 'Export Data to Delimited File', 'Export Data to XML', 'Show Report', 'Show Generic Report', 'Show Report Charts', 'Export Report to Excel', 'Export Report to Word', 'Export Report to PDF', 'Show Analytics', 'See Data Overall Statistics', 'Export Overall Statistics to Excel', 'See Group Statistics', 'See Fields Correlations', and 'Matrix Balancing'. The main area displays a table with 25 records. The table has columns for 'Category/Group 1', 'Category/Group 2', 'Matrix/Pivot', 'Bar Chart', 'Pie Chart', 'Line Chart', 'Data records', 'Dashboard', 'Charts', and 'Matrix Balancing'. The table is filtered by 'Item Type' and 'Order Priority'. The table is titled 'time12142025103905AM - Analytics'.

Click on the link “matrix” on the row with categories “OrderPriority”, “SalesChannel”. The Matrix report will be open for Sum of TotalRevenue in groups by OrderPriority, SalesChannel:

The screenshot shows the DataAI home page with a left sidebar menu and a main report area. The sidebar menu includes options like Log Off, List of Reports, Explore Report Data, Show Report, and Show Analytics. The main report area displays a matrix report for Sum of TotalRevenue by OrderPriority and SalesChannel. The report title is "time12142025103905AM121420251053AM". The report shows a table with columns for OrderPriority, SalesChannel, and TotalRevenue. The table is filtered by OrderPriority and SalesChannel. The report shows a total of 99 records. The report is displayed in a matrix format. The report shows a total of 99 records. The report is displayed in a matrix format. The report shows a total of 99 records. The report is displayed in a matrix format.

Working online in memory with DataAILite

There are three ways to work with DataAILite online just in memory, nothing will be kept after Log Off:

1. **Working with your data for free using our limited OpenAI credentials.**
Click [here](#) and enter your user ID (email or logon), and then select the data file (local or url). The Analytics page will be open.
2. **DataAILite.com - using user OpenAI credentials.**
Click [DataAILite.com](#) and enter your user ID (email or logon), and then select the data file (local or url). Enter your OpenAI credentials (optional, you can do it later). The Analytics page will be open.
3. **Download DataAILite and install locally** the site DataAILite

Download the installer InstallDataAILite.zip (143KB) or download the DataAILite.zip with DataAILite software (about 90MB) for manual installation. Windows 10/11 or Windows Server with IIS required for installation.

Click [here](#) to download DataAllite software.

Install it on your local Windows workstation or server using the Instructions for installation from [here](#).

Work with DataAllite locally just in memory for privacy and security of your data.

Conclusion:

Use [DataAllite.com](#) to analyze your data online just in memory using your OpenAI credentials. Nothing will be kept after Log Off!

Use our limited OpenAI credentials for instant online data analysis [here](#). Nothing will be kept after Log Off!

About [DataAllite.com](#) — Instant AI Analytics, Fully In-Memory:

Experience true real-time intelligence with [DataAllite.com](#), the AI-powered analytics platform where all data is processed and analyzed entirely in memory — never written to disk, never sent to the cloud.

Your Data, Your Memory

100% In-Memory Processing: Every dataset, chart, and insight is generated directly from RAM — giving you lightning-fast analysis and complete privacy.

No Uploads. No Traces. No Risk: Data never leaves your system, never stored on servers, and never cached.

Perfect for Confidential Analytics: Ideal for finance, healthcare, research, or any environment where data sensitivity matters.

AI-Driven. Zero Setup.

AI Pattern Detection & Forecasting — let GPT-4 intelligence uncover trends in-memory.

Ask in Plain English: “Which product had the highest growth last month?” — get instant answers.

No Database Required: Load files or connect live — everything runs locally and securely in volatile memory.

Blazing Speed: Instant results, even with millions of rows, thanks to full in-memory computation.

 Integrate or Stand Alone

Connect to Tableau or Power BI with Data connectors

Or run as a stand-alone AI dashboard engine on your local Windows IIS.

 Privacy by Design. Intelligence by AI. Speed by Memory.

Discover the future of secure analytics at DataAILite.com
